Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blankenship in view of Helmstetter.

Blankenship discloses a head having a borehole (Fig. 3), a protecting insert for cushioning in the form of soft material (0018), a fixing lower end portion of an insert being smaller than an upper end portion in diameter (Fig. 5), an insert with a plurality of second holes on a lower fixing end portion for allowing glue applied over a side of a lower shaft end and glue applied over an outer side of a fixing lower end portion of an insert to be joined together (0015), and second holes being regular and irregular shaped (0016).

Blankenship lacks a head borehole having an upper portion and a lower portion smaller than an upper portion in diameter and fixing a lower end portion of the insert in an upper portion of the bore hole. Helmstetter discloses a hosel having an insert which a liner is positioned with the insert having an upper portion and a lower portion smaller than an upper portion in diameter and fixing a lower end portion of the liner in an upper

portion of the insert (Fig. 8). In view of the patent of Helmstetter it would have been obvious to modify the head of Blankenship to have a head borehole having an upper portion and a lower portion smaller than an upper portion in diameter and fixing a lower end portion of the insert in an upper portion of the bore hole in order to not be required to have a soft insert along the entire hosel for a head where the shaft contacts the sole.
